

```
3 import {formatCurrency} from './utils/money.js';
4
5 import dayjs from 'https://unpkg.com/dayjs@1.11.10/esm/index.js';
6 import {deliveryOptions} from '../data/deliveryOptions.js';
7
8 hello();
```

we open order summary.js we moved this file into a folder

```
3 import {formatCurrency} from './utils/money.js';
4
5 import dayjs from 'https://unpkg.com/dayjs@1.11.10/esm/index.js';
6 import {deliveryOptions} from '../data/deliveryOptions.js';
7
8 hello();
```

file paths need to be updated do do slash is now inside the scripts folder

```
import { renderOrderSummary } from "../checkout/orderSummary.js";

renderOrderSummary();
```

```
import {cart, removeFromCart, updateDeliveryOption}
from '../../data/cart.js';
import {products} from '../../data/products.js';
import {formatCurrency} from '../utils/money.js';
import {hello} from 'https://unpkg.com/supersimpledev@1.0.1/hello.esm.js';
import dayjs from 'https://unpkg.com/supersimpledev@8.5.0/dayjs/esm/index.js';
import {deliveryOptions} from '../../data/deliveryOptions.js';
```

```
... JS money.js (Working Tree) JS checkout.js JS orderSummary.js JS paymentSummary.js
scripts > checkout > JS paymentSummary.js
1 |
```

put all our code in a function so we can regenerate the HTML if we need to

Main Idea of JavaScript

1. Save the data
2. Generate the HTML
3. Make it interactive

Main Idea of JavaScript

1. Save the data (Model)

2. Generate the HTML

3. Make it interactive

Steps

1. Loop through the cart

2. For each product,
price * quantity

3. Add everything together

Order Summary

Items (3):	\$42.75
Shipping & handling:	\$4.99
Total before tax:	\$47.74
Estimated tax (10%):	\$4.77

Order total: **\$52.51**

Place your order

Unchecked runtime.lastError: The message port closed

```
> localStorage.removeItem('cart');
```

```
export let cart = JSON.parse(localStorage.getItem('cart'));  
console.log("it is cart", cart);
```

```
if(!cart){ // integrate delivery with normalization  
  cart = [{  
    productId: 'e43638ce-6aa0-4b85-b27f-e1d07eb678c6',  
    quantity: 1,  
    deliveryOptionId: '3'  
  }, {  
    productId: '15b6fc6f-327a-4ec4-896f-486349e85a3d',

```

function so we can reuse this (and we'll practice some modules so let's select

```
(Working Tree) JS checkout.js M JS orderSummary.js
data > JS products.js
1 function getProduct(productId) {
2   let matchingProduct;
3
4   products.forEach((product) => {
5     if (product.id === productId) {
6       matchingProduct = product;
7     }
8   });
9 }
```

```
Working Tree) JS checkout.js M JS orderSummary.js
data > JS products.js
1 export function getProduct(productId) {
2   let matchingProduct;
3
4   products.forEach((product) => {
5     if (product.id === productId) {
6       matchingProduct = product;
7     }
8   });
9
10  return matchingProduct;
11 }
12
```

```
products > checkout > JS paymentSummary.js
const paymentSummaryHTML = `
  <div class="payment-summary-title">
    Order Summary
  </div>

  <div class="payment-summary-row">
    <div>Items (3):</div>
    <div class="payment-summary-money">$42.75</div>
  </div>

  <div class="payment-summary-row">
    <div>Shipping & handling:</div>
    <div class="payment-summary-money">$4.99</div>
  </div>

  <div class="payment-summary-row subtotal-row">
    <div>Total before tax:</div>
    <div class="payment-summary-money">$47.74</div>
  </div>

  <div class="payment-summary-row">
```

and if we need to

ex

6.005.toFixed(2) => '6.00' ❌

7.005.toFixed(2) => '7.00' ❌

scripts > utils > JS money.js

```
1 export function formatCurrency(priceCents) {  
2   return (Math.round(priceCents) / 100).toFixed(2);  
3 }  
4
```

interactive in this section is the place
order button however
